Exploration 3.1.2: UX Flow

1. What is a UX flow, and what does a UX flow describe?

A UX flow is boxes and arrows diagram that shows the user experience of your software.

2. In this course, we want to embrace a UX flow style that is task-oriented, where each box represents a screen in the software. Given that premise:
    1. Pick one example of a "bad" UX flow from the example specification docs above. Explain why you feel it is bad. Be brief.

        The "bad" example that I picked was from the second pdf because it does not have a UX flow it does have a flow chart that is not very descriptive and a screen by screen section but there are no images or pictures that show the movement.

    2. Pick one example of a "good" UX flow from the example specification docs above. Explain why you feel it is good. Be brief.

        The one I picked for a "good" UX flow was # 4 the flow chart looked to be well thought out and the pictures seemed to visually represent what they wanted to build.
